DETAILED ACTION

Allowable Subject Matter

Claims 2 and 3 are allowed.

Regarding independent claim 2, the closest prior art to the instant invention is Fuse et al. (JP 10-43903A). Fuse et al. teaches a diamond cutting tool provided with a mono crystalline diamond tip having a cutting edge ridge in a rounded shape at a front end, wherein a portion of said cutting edge ridge serving at least as a cutting edge (2) is formed to have constant roundness by intersecting a first conical surface as a rake face (3) with a second conical surface as a flank (5), said cutting edge ridge is rounded with a radius, said first conical surface has a width (w) and a swarf release face (4) ('903, figure a & b). Furthermore, regarding 2, Fuse et al. discloses the claimed invention (i.e. the edge is rounded with a radius of 1.5mm and a first conical surface width, w of 0.8 μm), except the radius being less than 100nm and the width being 1-5 μm . It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the radius and the width depending on the size of the tool, cutting application and type of workpiece being machined, because it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art.

However, Fuse et al. fails to anticipate or make obvious the first conical surface and the swarf release face being joined by a rounded face.
